Front Is Covered With Poultry Netting to Keep Out Pestiferous Sparrows and Mites.

Our new poultry house and scratch room combined is the handlest I have ever seen. It is 48 feet long by 8 feet wide, 91/2 feet high in front and 61/2 feet at the back. The scratching shed roof is a foot lower throughout, writes Alice McNarie of Baldwin, Kan., in the Farmers Mail and Breeze. The floor is of cement and the roof shingled. The front of the scratching room is covered with poultry netting to keep out sparrows, which also means to keep out mites. At the back of the scratching room are 12 wire nests 21/2

House and Scratch Room.

tened to a 2 by 4 at the back by means of a single staple. At the front the nests are stapled to a 1 by 3-inch strip which rests on brackets at the ends. At night the nests may simply be tipped back to the wall to keep the hens from roosting on them. The roosts are on a level and 21/2 feet above the floor.

OLD HENS ARE POOR LAYERS

Experiments at Maryland Station Shows That Aged Birds Are Maintained at Serious Loss.

At the Maryland station, in a study of the egg production of sixty white Leghorn bens in three successive years, the average number of eggs per bird was 171.3 the first year; 149.1 the second year and 151.1 the

The estimated cost of the maintenance of the flock was \$90 for each year; the profit per hen was \$2.07 the first year, \$1.61 the second year and 90 cents the third year. All of the five hens which produced 200 eggs and over laid their first egg in November, whereas of the fowls producing 100 and under only 3.7 per cent, laid their first egg in November; 4.4 per cent. laid their first egg in January, and 13 per cent. laid

their first egg in February. One fewl made the best record in the third year, 13 in the second year, and the remainder during the first
